

Table of Contents

Introduction	xiii
Rust in a Nutshell	xiii
Notational differences	xiii
Conceptual differences	xiii
Learning Rust by Doing	xiv
I Getting Started with Rust	1
1 Using the Rust Playground	5
2 Getting the Rust Tools	11
3 Using the Rust Compiler	15
4 Editors for Rust Source Code	17
Editing Rust source code	17
Visual Studio Code	17
Vim, Neovim, and Emacs	18
Zed	19
RustRover	19
5 Getting to Know Cargo	21
Hello, Cargo	21
The Cargo configuration file	23
II Building Blocks of Rust Programs	25
6 Strings and Numbers	29
Strings	29
String slices	30
Numbers	31
7 Tuples and arrays	35
Tuples	35
Arrays	36
Sorting the array	40
8 Iteration and Looping	43
9 Making Decisions	47
10 Functions	53
11 Structs	57
Struct implementations	60
Methods	62
12 Enums	67
Enums with Associated Values	71

13	Pattern matching	73
14	Optional values	77
	Handling optional values	80
15	Ownership, references and borrowing	83
	Ownership	83
	Scope	85
	Examples of ownership and scope	85
	References	90
	Borrowing	91
16	Vectors	93
	Sorting a vector	94
17	Command-line arguments	95
18	Errors	99
19	Traits	103
	Implementing the Display trait	103
	The Default trait	105
	The FromStr trait	107
20	Crates	109
	Making random dates	109
	Making random descriptions	114
	Making random events	116
21	Testing	119
	A better Date struct	119
	Creating a test module	121
	Random dates again	122
	Writing tests for the Category struct	123
22	Comments and documentation	125
	Comments	125
	Documentation comments	125
	Generating documentation	126
23	The Birthday program	127
	Getting the BIRTHDATE environment variable	127
	Parsing BIRTHDATE as a date	129
	Constructing the age message	131
	Adding unit tests	132
III	Programming Today	135
24	Creating the Today program	139
	The revised Event struct	139

Testing the program	140
25 Modules	145
Packages and crates	145
Modules	145
The birthday module	146
The events module	148
26 Event providers	151
Creating a new module for the providers	151
A simple event provider for testing	152
Creating submodules for providers	154
27 Text file event provider	157
Reading a text file	159
Integrating the text file provider	161
28 CSV file event provider	165
Using the csv crate	165
Integrating the CSV file provider	168
29 Configuration directories	169
Getting the config directory name	169
Building the configuration path	171
30 Configuration file	173
Parsing the TOML file	174
Instantiating the event providers	177
31 Reading events from a SQLite database	181
Getting SQLite	182
The event database schema in SQLite	182
Using the rusqlite crate	184
Testing database operations	188
Getting events from the database	190
Integrating the SQLite event provider	192
32 Reading events from a web service	193
The web service and REST API	193
Testing the API with curl	193
Preparing for the web event provider	195
Using the request crate	196
33 Filtering events at the source	199
Introducing event filters	199
Filter options	199
Accepting the event	200

Constructing filters with the Builder pattern	202
Testing the filters and the builder	204
Refactoring the event providers	206
34 Adding new event kinds	211
Annual events	211
Updating event providers to support annual events	213
Rule-based events	215
Using a regular expression to parse the rule	220
Resolving the rule	220
Updating event providers to support rule-based events	226
35 Handling command-line arguments	227
Parsing command-line arguments with clap	228
Defining subcommands	232
36 Logging	235
37 Adding new events	237
Revising the EventProvider trait	237
Implementing event addition for TextFileProvider	238
Implementing event addition for CSVFileProvider	240
Command-line arguments for adding events	241
Adding events to the SQLite database	244
Updating the providers subcommand	247
38 Grouping and sorting the events	249
Partitioning the events	251
IV Going Further than Today	253
39 Refactoring the Event Struct	257
A How this book was produced	259
Bibliography	261
Index	263
